

**Across**

- 4. animals can erode the soil by \_\_\_\_\_ and creating habitats underground
- 5. this age river flows fast and straight
- 7. arches are formed by this erosional agent
- 9. small bits of rocks and minerals that have been eroded
- 10. this age river produces deltas
- 11. \_\_\_\_\_ is the primary agent for erosion
- 13. \_\_\_\_\_ weathering breaks rocks apart without changing their chemical composition

**Down**

- 1. landslides, mudflows and slump/creep are caused by \_\_\_\_\_
- 2. \_\_\_\_\_ are defined by climate, landforms, and soil characteristics
- 3. the process of moving soil from one place to another
- 6. \_\_\_\_\_ weathering breaks rocks apart by changing their chemical composition
- 8. sediment, soil, and rock are layered after being eroded during this process
- 12. ice that creates U-shaped valleys
